To Whom It May Concern:

RE: Oak Ridge OR65HT Coating

During the spring of 2001 a decision was made to coat the drop pans of the MC-330 Material Transfer Vehicle by Blaw-Knox. This was done with the Oak Ridge OR65HT @ 250 mils thickness. This material was chosen for it's high heat resistance release qualities and high wear resistance.

Currently, there are more applications being considered throughout Ingersoll-Rand / Blaw-Knox production.

I would recommend this coating to anyone who would be in need of a high-heat, good release / clean-up and wear resistance coating.

Sincerely,

Len Speers

OAK RIDGE OR65HT PROTECTIVE LINING SYSTEM

USES

HOT ASPHALT
SAND • GRAVEL
RIPRAP • SLUDGE
ORE • LIMESTONE
SILICA • COAL
WASTE • SALTS
DRY BULK FOODS

FEATURES

seamless • no bolts or fastening systems • varying thicknesses to accommodate higher wear areas • resilient • has crack bridging ability • colors • bonded in place • insulation value • high temperature resistance to 400°F • good load release • leak tight • excellent abrasion resistance • no expansion/contraction effects • chemical resistance • repairable • refurbish worn beds • no interload contamination

OR65HT is a 100% solids elastomer specifically formulated for high temperature applications while providing excellent abrasion resistance, load release and insulating value. Applications are made on blasted and primed surfaces using OR65HT. This Liner will provide a seamless, bonded liner capable of many years of service.

OR65HT lining system provides the endurance and versatility to achieve faster return on your trucking investment.
